FIELD TRIP REPORT

Date: September 14, 2018  Destination: Haynie Archaeological Site in Mancos
Leader: Jim Mueller  Number of Participants: 16

Trip participants, Bill and Letha Cagle, Kristine Johnson, Jay Culver, Barbara Lawson, Ray Turner, Ruth Guarino, Jill and Bill Tripp, Betsy Moore, Phil Bruckbauer, Lyle Hancock, Barbara Arnold, Robert Hutson, Michel Mohr and Jim Mueller, met at 8:00 a.m. at Santa Rita Park for a half-day field trip to the Haynie Site, a Chaco-style great house outlier near Mancos, Colorado. This field trip was a follow-up to a talk on the same subject at our July meeting by Dr. Susan Ryan, Director of Archaeology, Crow Canyon Archaeological Center. Susan was our guide for this field trip.

The Haynie site was recently purchased from the previous owners, Ralph and Claudia Haynie, by three local benefactors to protect the site and allow Crow Canyon to do excavation work. Crow Canyon developed the Northern Chaco Outliers Project (NCOP) to study the Haynie Site along with the Ida Jean and Wallace Ruin, collectively known as the Lakeview group (I’m still looking for the lake). They are within a 1-kilometer radius of each other and the NCOP study is designed to understand the interaction and relationship between them during the Chaco (A.D. 1050–1140) and post-Chaco periods.

The Haynies both helped and hurt the investigative work. Claudia drew the most accurate map of the site and cataloged a lot of artifacts, but they dug up artifacts to sell to tourists and collectors. There are two great houses at the site, the East and West. The Haynie’s used a backhoe at the East great house to excavate a kiva. The West great house was mostly bulldozed to grade, but the foundations, subsurface rooms and floors, and a
few walls are mostly intact. This is where the current excavations by Crow Canyon are taking place by adult
volunteers.

As with the beginning of any large research project, aerial surveys, surface surveys, interviews with the prior owner and an
archaeologist who did some field work and stabilization work from 2008 to 2014 were conducted. Their journals, maps and field
notes were also reviewed. The Haynies also put their excavated materials in two separate piles, so Crow Canyon is doing some reverse
archaeology.

Construction of the two great houses began in A.D. 1,111, Pueblo II period, and the sites were probably still
occupied during the post-Chaco period. These great houses were built over previous site occupations of the

Crow Canyon is working with the Archaeological Conservancy to purchase the property from the current
owners to better protect the site and help fund future work. Unlike other archaeologic sites, 1) there is no
hurry or time limit due to future construction work, and 2) the excavation work that is going to be done has
been completed and we just visit the site and hear the story. At Haynie, I hope to conduct annual field trips so
that we can observe the work as it progresses from the beginning and hear the ideas and hypothesis of the
site as it is put together.

Trip participants: Bill and Letha Cagle, Kristine Johnson, Jay Culver, Barbara Lawson, Ray Turner, Ruth Guarino,
Jill and Bill Tripp, Betsy Moore, Phil Bruckbauer, Lyle Hancock, Barbara Arnold, Robert Hutson, Michel Mohr
and Jim Mueller
